

Dear Mum
 I just want to say how much I love you. Remember when I was a little girl you made me do things I didn't want to do, like tidy my room and go to the dentist. Well, now it's your turn! But this is not going to be scary. I want you to take control of your breast health like I have done. You and I are going to Clinical Thermography. It's painless, no contact and it's radiation free monitoring. As my Mother's Day gift for you I am going to take you along for a mother and daughter's appointment. It'll only take 30 minutes. That's only a tiny amount of time compared to all the time you gave me when I was growing up chasing my dreams.
 Love Allison x

Cut me out and stick me in a card for mum. Make her Mother's Day!

Dear Mum, you and I are going to have our breasts checked at Clinical Thermography as my Mother's Day gift to you. Love _____
 (write your name here)

\$50 Mother's Day discount when you book an appointment for Mum (or yourself!). Normally \$199 – just \$149 when you book this week for an appointment in May, June or July. Be quick, appointments are limited. Phone **0800 102 888** or request an appointment online at www.mybreasthealth.co.nz

Breast thermography offers women another tool for monitoring their breast health.

Breast thermography is a breakthrough imaging procedure using ultra-sensitive infrared cameras and sophisticated software to detect, analyse and produce high-resolution images of temperature variations in the breasts. These images of the breast are analysed and rated to determine the risk of developing breast cancer. Thermography is non-contact, safe and painless, no radiation or compression used. An abnormal thermogram can provide an early alert of potential problems and an opportunity to look at factors that can reduce the chances of a problem developing further. Women who want to take a proactive approach to their breast health will find great value in the additional information provided by thermography.
