

## Consent for Testing Procedure

Infrared Imaging is a non-contact, non-invasive test that demonstrates physiological patterns of your body. It is not a stand alone diagnostic test. The information provided by your thermal scan is combined with your history to enable your practitioner to plan an approach to your care.

A licensed medical practitioner is the only person qualified to diagnose. He or she must combine thermographic studies with your additional clinical and testing information to determine your problem. Infrared Images provide evidence of thermal asymmetries that may be present. An asymmetry may be indicative of a vascular, neurological, muscular or other physiological problem.

I have read the above information and I understand that I am not receiving a diagnosis of any condition based solely on my thermal scan. I understand that thermal imaging is non-invasive, and is reading the thermal patterns on the surface of my body. From this information a qualified practitioner will interpret any thermal abnormality displayed.

I understand that I am required to pay for this exam at the time of testing.
